

16@95 Improvement Projects

Major Mobility Projects — P.I. Numbers: 0012757 and 0012758

Fact Sheet

What are the Projects?

The 16@95 Improvement Projects will improve traffic flow and enhance safety along I-16 and I-95, one of Georgia's busiest freight corridors as well as the gateway to Georgia's growing port in Savannah.

Things You Need to Know

- Constructing an additional inside lane and shoulder along the I-16 mainline corridor, increasing the existing roadway from two lanes to three lanes in each direction.
- Adding three new bridges, replacing four existing bridges, and rehabilitating six existing bridges within the projects' limits.
- Replacing the two existing loop ramps located on the west side of I-16/I-95 Interchange with innovative turbine configuration ramps.
- Adding lighting at the I-16/I-95 Interchange.
- Building a two-lane, emergency-use median crossover on I-16 between I-95 and Dean Forest Road to aid during hurricane evacuations.
- Installing Intelligent Transportation System (ITS) technology, such as cameras and changeable message signs, to provide real-time driving conditions along I-95 and I-16 within the projects' limits.
- Constructing collector-distributor* (CD) lanes on I-95 NB to help improve traffic flow and safety to and from I-16 and I-95.

What's the Status?

Savannah Mobility Contractors JV has been selected as the Design-Build team for the project. Construction is scheduled to start in Q4 2019.

* Collector-distributor (CD) lanes run parallel to the main travel lanes of an interstate or highway, connecting them to access roads or entrance ramps in order to improve traffic flow, speed, and safety.
